FOOT-WASH *Pro*

Automatic Footbath for Cows

Key features and how it works:

Cow Counter

The counter is set according to the number of cows using the bath. It counts them automatically.

Full-width Pneumatic Drainage

Drainage of the bath starts once the set number of cows has passed through it. The full-width pneumatic gate drain means the dirty water is emptied out quickly and effectively.

Rinse with Powerful Spray

The bath is automatically rinsed with a powerful spray. The spray nozzles are adjustable to achieve the required direction of spray.

Control Box

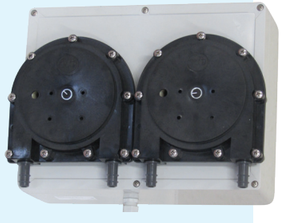

Quick Refill

The bath is then quickly refilled with clean water using a high capacity pump 220 l/min 1.85kW (2.5HP) and 3 large fill nozzles.

High Volume Dosage

Automatic Dosage

Hoof care product can be added to the bath during refill using the high volume dosage pumps. The system is delivered with 2 x 24V DC 4.6l/min dosage pump for use with different treatments.

FOOT-WASH *Pro*

Automatic Footbath for Cows

Two alternative control options available

- Automatic, adjustable cycles including for a.m., p.m. and evening
- Weekly or fixed chemical schedule
- Chemical pump prime function

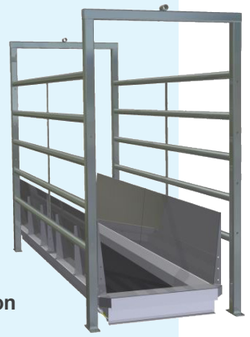

The control with logic module can be connected to the local network.
This means you can adjust any parameters remotely via your PC or smartphone.

Connections and plumbing on both sides of the bath

This provides a flexible and simple installation

Side panels & rails are also an option

Why use FOOT-WASH *Pro*?

How often do you use the footbath? And how often do you replace the water? On most farms there is simply not enough time. However, not replenishing the solution regularly can make the footbath spread infections.

FOOT-WASH *Pro* deals with these issues in an efficient way.

An expert's opinion:

Lameness in dairy cows is an underestimated problem. In a British study of more than 220 dairy farms the farmers estimated that about 7% of the cows were lame. However, on examination vets found that the actual figure was close to 36%.

Lameness causes high losses. Lame cows eat less, produce less milk, have more problems with metabolism and fertility, and require more labour. Experts estimate the total annual cost per cow is up to 740 pounds sterling (Mülling and Hagen, 2012).

If you want to get a grip on infectious hoof diseases, especially Dermatitis Digitalis, the regular use of a footbath is essential.
